

**INDUSTRIAL TRAINING**  
**IAS3316**

**INDUSTRIAL TRAININ REPORT**

Shuvon Syed Muztaba Rafid  
4183008591

Academic Supervisor  
Mr. Azman Ariffin

Industrial Supervisor  
Ts. Marina Binti Hassan

Faculty of Communication, Visual Art and Computing  
Universiti Selangor

August 2023

## **ACKNOWLEDGEMENTS**

Praise be to Allah for granting me the perseverance, opportunity, and intellect to successfully conclude my industrial training as a student of Unisel. Over the course of my two-month internship at the company, I acquired valuable knowledge and garnered numerous experiences. This internship has served as a catalyst for my personal growth and development, enriching me as an individual. I am immensely thankful and fortunate for the support and guidance of the individuals who have contributed to making this experience unforgettable.

I express my gratitude to Madam Marliza Binti Abdul Malik, my internship coordinator, and Mr. Hj. Azman Ariffin, my academic supervisor, along with Ts. Marina Binti Hassan, my industrial supervisor, for their invaluable guidance throughout this project, as well as their support for other fellow interns until the completion of their respective projects. Additionally, I wish to seize this moment to extend my heartfelt appreciation to my industrial supervisor for generously sharing her expertise and offering valuable insights during the project duration.

I extend my heartfelt gratitude to all my colleagues who have been my pillars of support throughout the development of this project. Their unwavering dedication, brilliant ideas, and continuous inspiration have been invaluable from the project's inception. Their hard work and kindness have not only facilitated the project's progress but have also enriched my understanding of both academic and real-world aspects of our field. The advice they've offered, not only regarding the project but also concerning life and academic matters, particularly within this course, will forever be cherished. I genuinely believe that this training experience has provided me with a deeper insight into the intricacies of operations and management within real-world project work.

Finally, I would like to express my deepest appreciation to my family members, who have been unwavering in their support throughout every circumstance. Their constant presence and encouragement have been a source of strength and motivation for me. I am profoundly grateful for their unending support and love. Thank you to my family for always being there for me.

# CHAPTER 1

## INTRODUCTION

### 1.1 Industrial Training Overview

Industrial training, also known as internship or practical training, is a structured program designed to provide students with hands-on experience in a professional setting within a specified time frame. Typically lasting between 3 to 6 months, these training programs can take place in various industries, including both private companies and government organizations. The primary goal of industrial training is to enhance and supplement the theoretical knowledge and skills acquired by students in their academic studies. By immersing themselves in real-world work environments, students have the opportunity to apply their classroom learning to practical situations, gaining valuable insights and experiences.

Moreover, industrial training serves to improve students' performance and help them achieve their career objectives by providing them with exposure to industry practices, networking opportunities, and mentorship from experienced professionals. Overall, industrial training plays a crucial role in preparing students for the challenges of their future careers and equipping them with the necessary skills and knowledge to succeed in their chosen fields.

During their industrial training, students have the opportunity to acquire new technologies and work skills that may not have been covered in their academic studies. Upon successful completion of their training, they are typically awarded credits and can graduate from their studies. This transition from student to employee is often contingent upon the demonstration of competency, dedication, and a strong work ethic during the training period.

The industrial training at Unisel, supervised by the FCVAC faculty, began on October 2nd. Initially, the focus was on self-directed learning and crafting a mini project to improve my skills. On October 19th, Madam Marina assigned me a project. Knowing I would return to Bangladesh on November 29th, I aimed to expedite the project using a FastTrack approach. Madam Marina provided clear requirements, enabling a smooth process. Consequently, I chose the Waterfall methodology. By November 2nd, I finished the development phase and moved to software testing, diligently addressing any bugs. Finally, on November 13th, I completed the project successfully.

## 1.2 Industrial Training Timeline

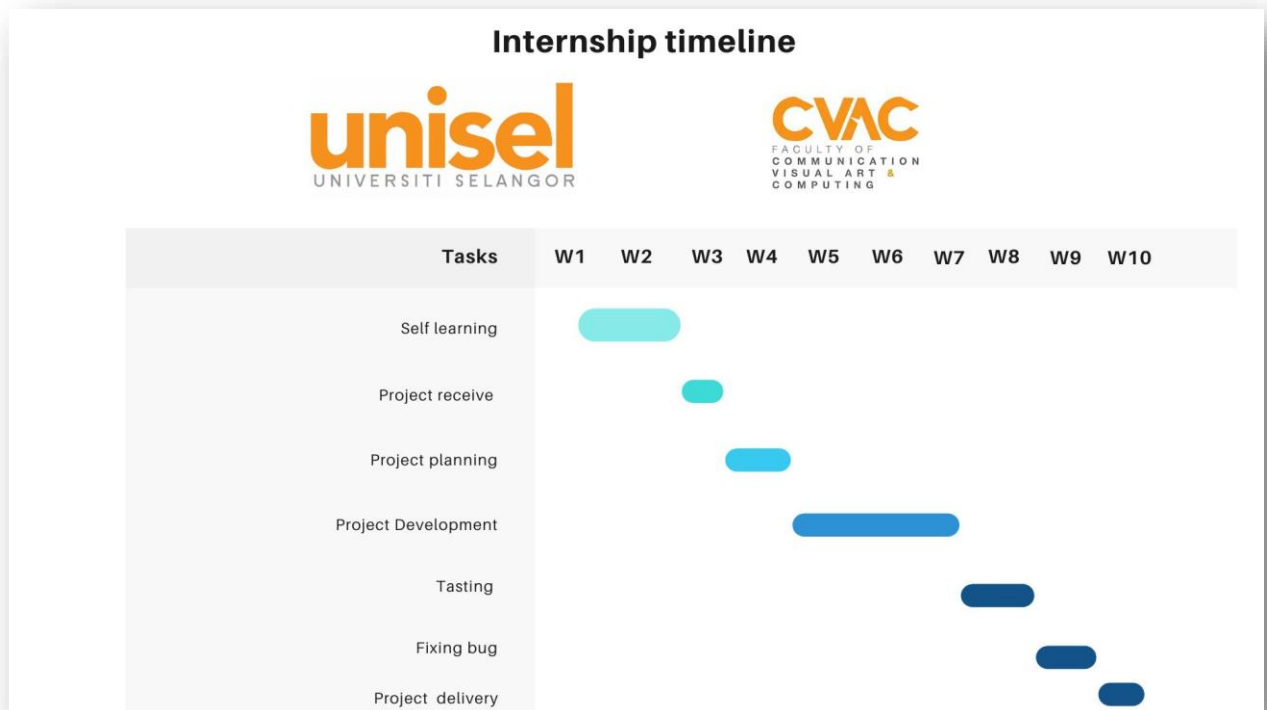

Figure 1: Industrial Training Timeline

The duration of Industrial training program is 9 weeks overall period from 2<sup>nd</sup> October 2023 until 27<sup>th</sup> November 2023

## 1.3 Company Overview

Universiti Selangor (Unisel), established in 1999, is a prominent public university located in Selangor, Malaysia. With a strong commitment to excellence in education, research, and community engagement, Unisel has emerged as a leading institution in the region.

At Unisel, the primary focus is on providing diverse academic programs across various disciplines, including business, engineering, information technology, arts, social sciences, and more. The university prides itself on offering innovative and industry-relevant curricula designed to meet the evolving needs of

the global workforce.

Led by a team of experienced faculty members and administrators, Unisel emphasizes a student-centric approach to learning, fostering a supportive and inclusive environment conducive to intellectual growth and personal development.

Beyond academics, Unisel actively engages in research and innovation initiatives, collaborating with industry partners and government agencies to address pressing societal challenges and contribute to national development goals.

Located in the dynamic state of Selangor, Unisel benefits from its strategic location within the vibrant economic and cultural hub of Malaysia. Its close proximity to major urban centers ensures easy access to resources, opportunities, and a rich cultural landscape for both students and faculty.

Overall, Universiti Selangor (Unisel) is dedicated to empowering future generations through quality education, research excellence, and community service, thus making a significant impact on the advancement of knowledge and the betterment of society.

#### **1.4 Company Organization Chart**

At the top of the organizational chart, there is the Chancellor or President who serves as the overall head of the university. Reporting directly to the Chancellor or President, there is Vice-Chancellors responsible for specific areas such as academic affairs, research, student affairs, and administration.

Below them, there are usually academic faculties or colleges, each headed by a Dean. These faculties are further divided into departments or schools, each overseen by a Department Chair or Head of Program. Faculty members, researchers, and lecturers work within these departments, delivering academic programs and conducting research.

Apart from academic units, there are also various administrative and support departments responsible for functions such as human resources, finance, facilities management, student services, and marketing.

## **CHAPTER 2**

### **WORK ASSIGNMENTS**

#### **2.0 Project Background Overview**

The University Selangor (Unisel) Pre-Registration System represents a pioneering venture aimed at reshaping the traditional pre-registration landscape within the dynamic sphere of higher education. In an era where knowledge acquisition intertwines with rapid technological advancements, Unisel stands at the forefront, recognizing the imperative need for a modernized, digital platform. With educational institutions grappling with burgeoning enrollments, an expanding array of course offerings, and the urgent call for streamlined administrative processes, the Unisel Pre-Registration System emerges as a beacon of innovation.

Beyond merely addressing administrative efficiency, this platform endeavors to transcend conventional boundaries, seeking to redefine the very essence of pre-registration. By integrating cutting-edge technology and intuitive design principles, Unisel aims to not only automate tasks but also enhance the overall pre-registration experience for all stakeholders involved.

Central to the ethos of the Unisel Pre-Registration System is the pursuit of transparency. Through the implementation of robust communication channels and user-friendly interfaces, the system seeks to foster an environment of openness and collaboration. Program coordinators and students alike are empowered to engage in informed discussions, facilitating a symbiotic relationship characterized by mutual understanding and cooperation.

In essence, the Unisel Pre-Registration System represents more than just a technological advancement; it embodies a commitment to excellence, transparency, and collaboration. Through its implementation, Unisel reaffirms its dedication to providing a seamless and enriching educational experience, paving the way for a future where technology serves as an enabler of progress and empowerment within higher education.

## 2.1 Problem Statement

The current administrative framework within the university presents several significant challenges that hinder operational efficiency and user experience. One notable issue is the reliance on semi-automated processes, which are not only time-consuming but also prone to errors and inconsistencies. These outdated procedures not only consume valuable time and resources but also impede the university's ability to adapt to the fast-paced nature of modern academia.

Additionally, there is a glaring lack of systematic event management practices, resulting in a disorganized and chaotic environment during important university events and activities. Without proper planning and coordination, events may suffer from logistical challenges, communication breakdowns, and suboptimal outcomes, ultimately impacting the university's reputation and stakeholder satisfaction.

Moreover, the existing system exhibits rigid structures that offer limited flexibility in course selection, hindering students' ability to customize their educational experiences according to their interests, career goals, and learning preferences. This lack of flexibility may result in dissatisfaction among students and faculty alike, as they feel constrained by outdated policies and procedures.

- Semi-automatic and time-consuming processes
- Lack of Systematic Event Management
- Lack of Systematic Event Management
- Limited User Visibility and Engagement
- Limited Flexibility in Course Selection
- Technological Obsolescence

In summary, addressing these challenges requires a comprehensive overhaul of the university's administrative framework, including the adoption of modern technologies, the implementation of systematic event management practices, and the promotion of transparency, flexibility, and user engagement. By addressing these issues head-on, the university can unlock new opportunities for growth, innovation, and excellence in higher education.

## **2.2 Objectives**

The primary objectives of the Unisel Pre-Registration System are to streamline the pre-registration process for both students and program coordinators. This entails enabling program coordinators to initiate pre-registration events with clearly defined start and end dates, ensuring efficient scheduling and organization. Simultaneously, the system aims to provide students with easy access to pre-registration events, facilitating seamless participation and course selection.

Additionally, the system serves as a comprehensive repository for semester and course details, offering program coordinators a centralized hub for managing and updating essential information. Centralized approach streamlines administrative tasks, reduces redundancy, and ensures accuracy in semester and course-related data management.

In summary, the Unisel Pre-Registration System is designed to simplify, streamline, and enhance the pre-registration experience for all stakeholders involved, ultimately contributing to a more efficient and transparent academic process.

- To simplify the pre-registration process for students and program coordinator
- To enable program coordinator to initiate pre-registration events with defined start and end dates.
- To allow students to easily view and participate in pre-registration events.
- To enhance communication between students and program coordinator regarding pre-registration.
- To provide a centralized system for managing semester and course details.

## **2 Justification project module**

### **2.3 Vision of the project**

Universiti Selangor (UNISEL) is driven by a profound vision to establish itself as a leading institution of higher learning in Malaysia, characterized by its unwavering dedication to providing education and training of unparalleled quality and relevance. Central to this vision is the commitment to nurturing graduates who transcend mere competence, equipped not only with the necessary skills and knowledge but also imbued with the adaptability and foresight to navigate the

dynamic landscapes of both industry and society.

At the core of UNISEL's ethos are its fundamental values, which serve as guiding principles in all endeavors:

- **Excellence:** UNISEL strives for excellence in all aspects of its educational offerings, seeking to provide students with the highest standard of education and training. Through rigorous academic programs, innovative teaching methodologies, and state-of-the-art facilities, the university endeavors to cultivate a culture of excellence that permeates every facet of its operations.
- **Integrity:** Upholding the highest ethical standards is paramount at UNISEL. The university is committed to fostering an environment of trust, honesty, and accountability, where integrity is upheld not only in academic pursuits but also in all interactions within the university community and beyond.
- **Innovation:** UNISEL prides itself on being at the forefront of innovation in teaching, learning, and research. By embracing emerging technologies, adopting progressive pedagogical approaches, and fostering a culture of creativity and experimentation, the university seeks to continuously push the boundaries of knowledge and discovery.
- **Collaboration:** Recognizing the importance of collaboration in achieving its mission, UNISEL actively seeks partnerships with industry, government, and the community. Through strategic alliances and collaborative initiatives, the university endeavors to leverage collective expertise and resources to address complex challenges and drive positive change.
- **Social Responsibility:** UNISEL acknowledges its role as a responsible member of society and is committed to contributing to its development. Whether through community outreach programs, research endeavors addressing pressing societal issues, or initiatives aimed at promoting sustainability and social justice, the university strives to make a meaningful impact beyond the confines of its campus.

In essence, Universiti Selangor (UNISEL) is not only dedicated to academic excellence but also to fostering a culture of integrity, innovation, collaboration, and social responsibility. Grounded in these values, the university endeavors to fulfill its vision of producing graduates who are not only proficient professionals, but also compassionate and socially conscious leaders poised to make a positive difference in the world.

### 2.3.1 Mission of the project

Universiti Selangor (UNISEL) is deeply committed to cultivating an exemplary learning atmosphere conducive to the development of proficient, principled professionals, and scholars. This dedication is manifested through several key initiatives:

- 1. Provision of Quality Education and Training:** UNISEL is dedicated to delivering top-tier educational programs across various disciplines and levels. Through a team of seasoned faculty members, the university ensures that its curriculum remains relevant to industry demands, equipping students with the necessary knowledge and skills to excel in their chosen fields.
- 2. Fostering a Supportive Learning Environment:** Central to UNISEL's mission is the creation of a nurturing learning environment that empowers students to thrive. The university invests in modern facilities, cutting-edge technology, and ample resources to facilitate comprehensive learning experiences. From well-equipped laboratories to extensive libraries and student support services, UNISEL strives to provide students with the tools they need to succeed academically and personally.
- 3. Cultivating Competent, Ethical Graduates:** Beyond academic excellence, UNISEL places a strong emphasis on cultivating ethical and socially responsible graduates. The university endeavors to instill in its students a sense of integrity, empathy, and a commitment to making a positive impact on society. Through various experiential learning opportunities, community engagement initiatives, and ethical leadership development programs, UNISEL aims to nurture well-rounded individuals who are not only proficient in their respective fields but also conscientious global citizens.

With unwavering dedication to its mission, UNISEL is confident in its ability to produce graduates who are not only skilled and ethical but also poised to become catalysts for positive change in their communities and beyond.

## 2.3 Project Requirements

Hardware Requirement	Software Requirement
Laptop - Intel(R) Core (TM) i5-8250U CPU @ 1.60GHz 1.80 GHz	Xampp
Memory (RAM) – 16.00 GB	Visual Studio Code
Display type – Nano Edge display	Operating System – Windows 11
Logitech keyboard	Google Chrome
Logitech mouse	Microsoft office

Table 2. 1: Projects Requirement

### 2.3.1 Developments tools

#### 2.3.2 Visual Studio Code (VS Code)

Visual Studio Code, an open-source source-code editor developed by Microsoft, plays a pivotal role in composing and editing source code for the Unisel Pre-Registration System project. Renowned for its lightweight design, VS Code offers extensive customization options and supports multiple programming languages. Within the project, this versatile editor proves invaluable, providing essential features like syntax highlighting, autocompletion, and a vast selection of extensions. Its flexibility is further enhanced by the availability of numerous extensions and plugins, catering to the diverse technological requirements of web development. As a result, Visual Studio Code serves as a cornerstone tool, empowering developers to efficiently navigate and manipulate code to meet project objectives.

#### 2.3.3 XAMPP

XAMPP, a web server solution stack developed by Apache, is a freely available and open-source platform designed to be cross-platform. It integrates Apache, MariaDB, PHP, and Perl

to provide a comprehensive development environment. In the context of the Unisel Pre-Registration System project, XAMPP functions as a local web server environment for development purposes. This allows developers to test the application locally before deploying it to a live server. Notably, MariaDB, included in XAMPP, serves as the project's database management system, housing critical data such as user details and pre-registration history. Additionally, PHP, supported by XAMPP, handles server-side scripting tasks, including user request processing, database interactions, and dynamic content generation for the web application. Together, these components form a robust foundation for efficient development and testing of the Unisel Pre-Registration System.

## 2.4 User Scope

Project UPRS	
User	Description
Admin (Program Coordinator)	The administrator, also known as the Program Coordinator, is responsible for overseeing the system and managing all of its functionalities.
User (Student)	The user, also referred to as the student, is an individual who utilizes the system.

Table 2. 2: User Scope for Project 1 and Project 2

System	Description
Login / Register	Both users and administrators can utilize the system to log in and access its features. However, only users have the capability to register for the system.
Semester and Course Management	The administrator has the authority to manage semesters and courses within the system. This includes the ability to modify, delete, or add new semesters, as well as the corresponding courses.
User Management	The administrator has the authority to delete user data if they suspect suspicious activity or behavior.
Pre-Registration Event Management	The administrator is empowered to initiate pre-registration events, while users, acting as students, have the capability to utilize the system to register for pre-registration. This involves selecting their subjects for the upcoming semester.
Pre-Registration Form	Here, users have the ability to fill out their desired subjects for the upcoming semester.
Pre-Registration History	Both users and administrators can access the pre-registration history. Users can view their own history, while administrators have the authority to view the history of every student.

Table 2. 3: System Scope

## **CHAPTER 3**

### **APPROACH**

#### **3.0 Introduction**

The work life cycle represents the stages individuals undergo in their careers, from recruitment to retirement. Similarly, the Waterfall methodology offers a structured approach to project management, ideal for clear and stable project requirements. It progresses sequentially through planning, design, implementation, testing, and deployment phases, ensuring predictability and stability. However, its rigidity may not suit projects with evolving needs. Understanding context is key in selecting the appropriate methodology.

#### **3.1 Deliverables**

##### **3.1.1 Work Life Cycle**

The work life cycle encompasses the different phases of experiences individuals undergo during their employment or practical endeavors. Beginning with recruitment, it progresses through various stages until concluding with resignation, termination, or retirement. This employee life cycle model is typically broken down into several key stages. Initially, individuals are recruited into a position, followed by their onboarding and integration into the organization. Subsequently, they engage with development opportunities to enhance their skills and career progression. As their tenure progresses, employees may transition into new roles or take on additional responsibilities. Finally, the cycle concludes with the end of their employment, which may occur due to resignation, termination, or retirement. This life cycle mirrors the journey individuals undertake as they navigate through their working lives, including their experiences with education and professional development, such as the completion of studies at a university.

In our context, the Waterfall methodology is considered advantageous because it relies on a well-defined process. This approach proves especially beneficial when dealing with clear and straightforward requirements, and when there are no expected changes to the project scope. The Waterfall methodology follows a sequential approach, where each phase of the project, such as planning, design, implementation, testing, and deployment, is completed before moving on to the next

phase. This structured approach ensures that all requirements are clearly understood and documented before proceeding, minimizing the likelihood of misunderstandings or scope creep. Additionally, the Waterfall methodology provides a sense of predictability and stability, making it easier to plan and manage project timelines and resources effectively. However, it's worth noting that the Waterfall methodology may not be suitable for projects with evolving or uncertain requirements, as it lacks flexibility to accommodate changes once the project is underway.

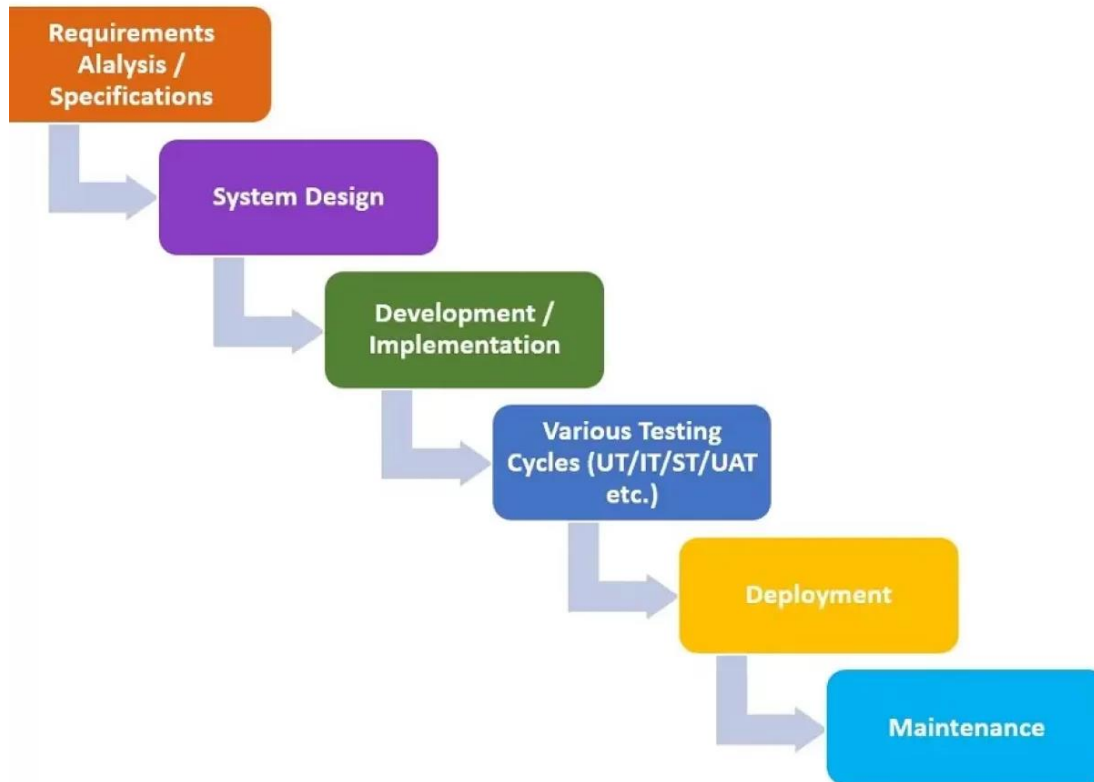

Figure 3 Waterfall methodology.

### 3.1.1 Phase 1- Requirement

During this phase, the focus is on collecting information from clients or end-users regarding their requirements and desired outcomes from the system. In this particular scenario, the project requirements were obtained through face-to-face consultations with Madam Marina Binti Hassan. This approach allowed for a comprehensive and direct exchange of crucial information, ensuring a clear understanding of the project objectives and expectations. Through open communication and active engagement with Madam

Marina, pertinent details were gathered, including specific functionalities, features, and performance criteria desired for the system. This collaborative process not only facilitated the gathering of requirements but also fostered a collaborative environment conducive to addressing any concerns or clarifications that arose during the consultation sessions. As a result, the project team was able to establish a solid foundation for proceeding with the development phase, with a thorough understanding of the client's needs and expectations.

### **3.1.1.2 Phase 2 – Design**

During this phase, we embarked on the development of both the logical and physical designs of the project. The logical design phase involved the conceptualization of theoretical solutions, where a thorough exploration of various design scenarios took place. This stage demanded careful analysis and creative brainstorming to envision potential solutions that align with project objectives.

Following the theoretical design phase, we transitioned into the physical design phase. Here, definitive decisions were made regarding the selection of necessary components to actualize project requirements. This encompassed the specification of software, hardware, and data sources essential for system implementation. Notably, critical choices were made, including the adoption of tools such as VS Code and xampp for system development. These decisions were informed by the requirements identified during the theoretical design stage, ensuring alignment with project objectives and feasibility considerations.

### **3.1.1.3 Phase 3 – Implementation**

This stage marks the commencement of the implementation process, where the actual coding work begins. The coding process initiates with establishing connections to the database and addressing other coding requirements. It is worth noting that due to the comprehensive design groundwork laid out in previous stages, this phase tends to be relatively short. Following the predefined roadmap established in the initial phases, each unit of code is meticulously tested upon completion. The culmination of integrating all

individual components results in the creation of the Unisel Pre-Registration system, representing the final product.

#### **3.1.1.4 Phase 4 – Testing**

In this stage, thorough testing protocols were implemented to verify compliance with project specifications and to pinpoint any potential system debugging requirements. Comprehensive evaluations of data validation were carried out to confirm the system's handling of erroneous data, including ensuring that numeric fields reject non-numeric entries. Additionally, user acceptance testing was conducted with selected students from Unisel to validate the system's functionality from the perspective of end-users. This rigorous testing phase aimed to ensure the system's reliability, accuracy, and usability prior to its deployment.

Go to APPENDIX A for more information.

#### **3.1.1.5 Phase 5 – Maintenance**

After the product release, the Maintenance phase of the Unisel Pre-Registration System project commences. During this stage, the focus is on providing continuous support and implementing enhancements. This includes addressing any issues reported by users, resolving bugs, and incorporating incremental updates to align with evolving requirements. Continuous monitoring is essential to ensure that the system maintains optimal performance, security, and adaptability. By prioritizing ongoing maintenance and support, this phase aims to ensure that the system remains responsive and well-maintained, thereby facilitating sustained efficiency in academic processes at Universiti Selangor.

### 3.1.2 Entity Relationship Diagram

An Entity-Relationship Diagram (ERD) serves as a visual representation of the relationships between entities within a database. This diagram illustrates how different entities interact with one another and provides a clear overview of the database's structure. By depicting entities as boxes and relationships as lines connecting them, an ERD offers valuable insights into the data model, including entity attributes and their associations. ERDs play a crucial role in database design and development, aiding in the planning, implementation, and maintenance of relational databases. They serve as a communication tool between stakeholders, helping to ensure that all parties involved have a common understanding of the database schema and its underlying relationships. In summary, ERDs serve as blueprints for database architects and developers, guiding the creation of well-organized and efficient database systems.

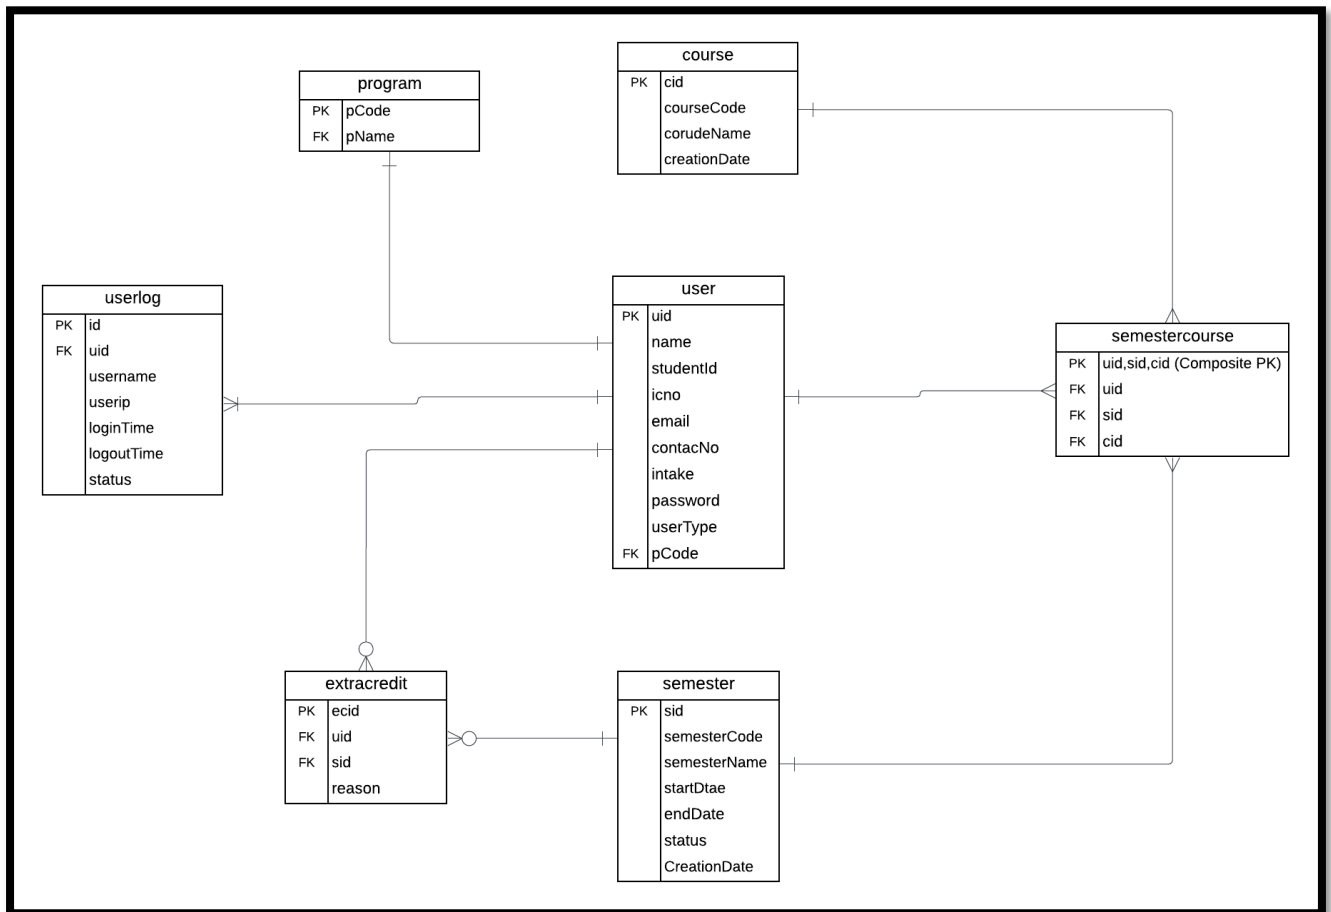

Figure 4 Entity Relationship Diagram

### 3.4 Screenshot of this project.

This page serves as the dashboard, providing the admin with access to various functionalities and activities. Here, the admin can perform a range of tasks and actions tailored to their role and responsibilities. These activities include but are not limited to managing user accounts, accessing reports and analytics, overseeing system settings, and performing administrative tasks such as data management and configuration adjustments. The dashboard acts as a centralized hub where the admin can efficiently navigate through different features and sections of the system, ensuring smooth and effective management of the platform. Additionally, the dashboard may offer customizable options, allowing the admin to personalize their workspace and prioritize the activities most relevant to their needs. Overall, the dashboard serves as a comprehensive tool for the admin to streamline their workflow and facilitate efficient administration of the platform.

## **CHAPTER 4**

### **4.0 Conclusion & Recommendation**

In conclusion, the Unisel Pre-Registration System project has achieved significant milestones in enhancing the efficiency and effectiveness of academic processes at Universiti Selangor. Through meticulous planning, diligent development, and thorough testing, the system now stands as a valuable asset for administrators, students, and faculty members alike.

The implementation of Visual Studio Code and XAMPP as central tools for source code editing and local web server hosting has greatly facilitated the development and testing phases. These versatile and user-friendly platforms have streamlined the development process and contributed to the successful delivery of the project.

Moving forward, it is recommended that continuous monitoring and maintenance of the system be prioritized to ensure its optimal performance and longevity. Regular updates and enhancements should be made to address emerging needs and technological advancements, thereby ensuring the system remains relevant and efficient in meeting the evolving requirements of the academic community.

Furthermore, ongoing training and support should be provided to users and administrators to maximize their utilization of the system's features and functionalities. This will foster a culture of continuous improvement and innovation, driving the sustained success of the Unisel Pre-Registration System.

In summary, the completion of the Unisel Pre-Registration System project marks a significant milestone in enhancing academic administration processes at Universiti Selangor. By leveraging modern technologies and best practices in project management, the system has laid a solid foundation for future advancements and innovations in academic management systems.
